

Professional Summary

- Quality Assurance professional with 11+ years of experience across Web, E-Learning, Client–Server, Healthcare and Manufacturing domains.
- Currently working as a Manual and Automation Test Engineer, with strong hands-on experience in API and Database Testing, for US-based manufacturing applications, ensuring high quality, performance, scalability, and stability of enterprise systems. Actively involved in automation frame work execution and maintenance, integrating automated test suites into CI/CD pipelines.
- Strong expertise in Manual Testing, Automation Testing, API Testing, Database Testing and WebSecurity Testing with hands-on experience in Agile (Scrum) and Waterfall methodologies, and deep understanding of STLC/SDLC processes.
- Extensive experience in test planning, test design, execution, defect tracking and reporting, covering multiple testing types including System, Regression, Integration, UAT, Performance, and Mobile Testing.
- Hands-on experience with CI/CD tools such as Jenkins, GitHub, AWSEC2,and AzureDevOps, along with strong exposure to database validation and security testing, including live credit-card transaction validation.
- Proven QA leadership experience, managing teams of 4+members, successfully delivering high-quality projects under tight deadlines through effective cross-functional collaboration.
- Leveraged generative AI tools such as GitHub Copilot and augmented AI solutions to design, generate, and optimize test cases, enabling faster creation of scalable automated test suites.
- Automated end-to-end and regression test scenarios using AI-assisted code generation, improving test coverage and reducing manual effort.
- Collaborated with development teams to adopt AI-assisted workflows, increasing productivity and reducing delivery timelines.

Skills

Testing Expertise	Manual Testing, WebService Testing, API Testing, Mobile Testing, Performance Testing, User Acceptance Testing (UAT), Regression Testing, End-to-End Testing.
Automation Tools	Playwright(JavaScript), Postman, Swagger, JMeter
Defect & Test Management Tools	JIRA, Bugzilla, AzureDevOps, ZephyrScale
Automation Framework	Cucumber(BDDFramework)
Databases & Cloud	MSSQLServer,MySQL,DatabaseValidation,AWSEC2
CI/CD &Deployment	Jenkins, AzureDevOps Pipelines
Collaboration Tools	Confluence, MicrosoftTeams, Outlook, Slack
AI-Assisted Tools	GitHub Copilot, Augmented AI (AI-assisted testing tools).

Experience

Ashley Furniture Industries, Inc
Chennai, TamilNadu

Apr2023-May2026

Senior Quality Engineer

Currently working as a QA Engineer for IT Product Systems that support global furniture manufacturing, retail, and distribution operations. Responsible for ensuring the quality, performance, and reliability of business-critical applications by validating requirements, identifying defects, and collaborating with cross-functional teams to deliver scalable and efficient IT solutions.

Roles & Responsibilities

- Design, review, and execute test cases and test scenarios aligned with functional and business requirements. Perform Manual and automated testing to validate application functionality, integration and performance.
- Manage the completed effect lifecycle, including defect logging, tracking, retesting and closure in coordination with development teams.
- Conduct performance and load testing to ensure system scalability, stability and responsiveness.
- Collaborate with developers, product owners and business analysts to clarify requirements and resolve issues efficiently. Support User Acceptance Testing (UAT) and assist in release validation and sign-off activities.
- Prepare and maintain QA dashboards, defect metrics and test execution reports for release readiness.
- Maintain comprehensive QA documentation, including test plans, test cases and execution results.
- Develop and maintain reusable automated test suites using Playwright with JavaScript, achieving 25% reduction in test execution time.
- Actively participate in Agile (Scrum) ceremonies and contribute to continuous quality improvement initiatives.

Entrans Technologies
Chennai, TamilNadu

Jan2021–Apr2023

Senior Quality Engineer

Intely Care is a leading technology-enabled nurse staffing platform in the United States, leveraging an AI-driven system to intelligently match nursing professionals with open assignments across 1,600+ healthcare organizations nationwide. The platform supports large-scale scheduling, workforce optimization, and real-time staffing needs for healthcare providers.

Roles & Responsibilities

- Performed functional, integration, system and mobile testing to ensure application stability and quality. Executed data-driven API testing using Postman and validated backend services hosted on AWS EC2.
- Participated in Agile (Scrum) ceremonies, including sprint planning, daily stand-ups, reviews and feature demos. Supported build deployment and validation in AWS and Jenkins environments to ensure release readiness.
- Managed the defect lifecycle, facilitated defect triage and mentored junior QA members to maintain quality standards.
- Worked on end-to-end healthcare application testing, including EHR/EMR functionalities, HL7 integrations, and FHIR interoperability validation.

Zydesoft Solutions
Chennai, TamilNadu

Jan2015–Jan2021

Software Test Engineer

CompuSystems is a leading provider of trade show registration solutions in the United States and Canada. The project involved testing web-based registration applications to ensure they met the business requirements of exhibiting organizations and provided a seamless, reliable experience for trade show attendees.

Roles & Responsibilities

- Executed functional, regression and specification-based testing of web registration applications for U.S. and Canada trade shows.
- Validated backend database integrations and performed performance testing to ensure system reliability and scalability.
- Managed the defect lifecycle, including defect logging, tracking, retesting and closure to ensure release quality.
- Performed end-to-end credit card payment workflows including authorization, capture, refund and settlement processes.

Junior Test Engineer

Worked on a web-based E-Learning application consisting of Student Edition and Instructor Edition modules. The platform enables students to learn concepts and take assessments through real-world video content and interactive questions, while instructors manage course work, evaluations and access controls. The project involved validating functional accuracy, usability, and business requirements through manual testing.

Roles & Responsibilities

- Executed manual test cases derived from Business Requirement Documents (BRD) and Functional Specifications.
- Logged, tracked, and validated defects using JIRA, ensuring timely resolution and quality closure.
- Prepared QA dashboards, execution status and test closure reports for stakeholder visibility.
- Actively participated in client discussions and contributed to projects following both Agile and Waterfall methodologies.
